

PROBLEM: ENGINEERS SPEND TOO MUCH TIME ON QUOTES!

“I have my sales folks work up a quote, but it constantly goes back and forth between them and engineering a couple times before it's right. This is killing my profits and tying up engineering.”

SOLUTION: POWER2

It's hard to get engineering expertise in a salesman or to find sales skills in an engineer. That doesn't mean you're condemned to an information tennis match between sales and engineering, with each volley eroding your profits.

Your Power2 built application integrates tightly with SolidWorks to:

- 🌟 **Handle Engineering calculations**
- 🌟 **Look-up required data from databases and tables**
- 🌟 **Build a valid 3d SolidWorks model**
- 🌟 **Generate drawings**
- 🌟 **Write out an accurate quote**

Now a sales person can generate a quote based on your best engineering expertise, without the engineer being there – the expertise is built-in!

Engineering is hard, but using Power2 is easy. Your engineers capture their design rules as diagrams to automate your design problems. Then, anyone who understands your product can enter a specification and generate correct designs and quotes.

With Power2 your quotes are quick and correct the first time, every time.

Power2. The Power2 shatter process bottlenecks.
